

## **Mme TARISSE, Manager of the technical services of a community**

Mme Tarisses's choice of this job results of a collection of opportunities and professional phases, be they jobs or formations.

Her initial formation was in agronomy. She then landed a job as manager of waste selection for recycling on behalf of a large community (several towns). She passed contest exams to get more flexible jobs within communities, then passed a professional degree in technical activities within a community which led her to her current position in which she manages all the technical services hence controls teams of men.

Her mission : detect and solve all technical issues arising in a community, with the help of citizens. This includes whatever solutions that will allow savings.

Her domain includes the streets and roads, municipal buildings, parks and green spaces, team management; she also has to implement the town council's decisions with respect of all ad hoc regulations.

Her job is polyvalent, demanding, and it requires that she communicates easily with the political personnel as well as she conforms to whatever new rules come up.

Therefore, such a job requires availability, diplomacy, teaching skills, strength, an open mind and presence on the spot.

Positive aspects : you get to see your work in progress – flowering, for example.

A challenge : improve the planning of the crew's tasks

Sustainable development results of the alliance of the social, economic and environmental sides of our lives.

Mrs Tарisse's current concern is the evolution of communities at different levels since the governemtnwants to downsize these structures nationwide.

Her piece of advice to girls : never hesitate to go to technical jobs since they offer lots of outlets and numerous formation opportunities.
